

What the Press is saying about The ProScope

MacAddict, (droolworthy) October 2001

While it's about as attractive as an Epilady, this gadget is pretty cool. This handheld USB microscope lets you snap still images and time-lapse movies at 50x magnification. It comes with a standard tripod mount and backlighting for easy viewing- perfect for examining live insects, dead bodies and other objects we haven't thought of yet. - NR
